Section 1: Facility Background

Lincoln Middle School

Lincoln Middle School is located at 1501 California Avenue in Santa Monica, CA 90403. It is a middle school serving approximately 1,067 students ranging from grades 6-8 and provides instruction using 7 permanent buildings. The total amount of occupied space is 157,108 SF. For a complete map of the campus, see Appendix A.

The campus operates on an academic calendar that begins in late August and ends in late June. Winter Break is a two week break that begins at the end of December and goes to the first week of January. Spring Break is a one week break that begins in early-April. School is in session beginning at 8:20 a.m. and continuing until 3:50 p.m., Monday through Friday. For a complete academic calendar and bell schedule, refer to Appendix A.

Utility Costs and Rate Schedules

The Lincoln Middle School facilities receive electricity services from Southern California Edison (SCE) and gas services from SoCalGas (SCG). Monthly utility data is considered separately for each utility meter and each energy type (electricity, natural gas, propane, diesel, and water).

The following is a list of the meters associated with each energy type utilized at Lincoln Middle School:

Account Number	Meter Number	Rate Schedule
3-008-1626-05	V349R-000310	TOU-GS-2-B
3-001-1511-78	222013-752627	TOU-GS-1-A
3-001-1511-79	255000-008357	TOU-GS-1-B

Account Number	Meter Number	Rate Schedule
866038000	13619141	GN-10
1055038000	13618837	GN-10
1076038000	13425610	GN-10
1286038000	11148523	GN-10

The utility data provided uses the data recovered from each of these meters during the period of July, 2015 to June, 2016. The cost comparison of Lincoln Middle School’s gas and electricity costs can be seen in the table below:

Benchmarking

As part of the site evaluation we determined the Energy Utilization Analysis (EUA) to provide important information about the energy usage of the school. Listed in the table below is the Benchmarking Report for Lincoln Middle School:

Energy Use Intensity Calculator					
Electricity		Natural Gas		Other Fuels	
1.25	<i>W/SF</i>	0.21	<i>Therms/SF</i>	0.00	<i>Gals/SF</i>
4.70	<i>kWh/SF</i>	\$ 0.16	<i>Cost/SF</i>	\$ 0.00	<i>Cost/SF</i>
\$ 0.68	<i>Cost/SF</i>				
Energy Costs/SF/Year		\$ 0.85	Energy Use(Kbtu)/SF/Year		71.52

The main purpose of this report is to assess the current energy usage of Lincoln Middle School. Energy consumption is analyzed compared to the site's actual weather data expressed in Cooling Degree Days (CDD) & Heating Degree Days (HDD). Graphs comparing the energy consumption to the CDD and HDD can be found in Appendix B.

The Baseline Energy Utilization Analysis (EUA) report compiles the monthly energy data from all meters on site. The EUA is useful in identifying critical energy consuming benchmarks like kWh/SF, kBtu/SF, and Cost/SF for each fuel type and individual school site. This report is a great resource to have for identifying the lowest energy performing schools. The report ranking will present the schools that consume the most energy when compared to others within the district or other comparable districts. The considered school is rated at 4.70 kWh/SF/yr.

The baseline EUA summary of all the meters for Lincoln Middle School can be found in Appendix B.

Section 2: Energy Efficiency Measures (EEM) Summary

Energy savings are based on the difference between annual energy use under existing conditions and annual energy use under proposed conditions. These annual energy savings, and the corresponding annual energy cost savings, are used to determine the cost-effectiveness of the projects. Demand savings are calculated as the different between the electricity demand of the existing equipment and electricity demand of proposed equipment. The table below shows the Energy Efficiency Measures proposed and the corresponding savings associated with them.

EEM Number	Energy Efficiency Measure	Demand Savings (kW)	Electricity Savings (kWH/yr)	Natural Gas or Fuel Savings (therms or gal/yr)	Annual Cost Savings (\$)	Rebates and Grants (\$)	Installed Measure Cost (\$)
Lighting	Lighting – Interior Fixture Retrofit	64	127,536		\$18,620.00	\$115,000.00	\$330,137.00
Lighting	Lighting – Exterior Fixture Retrofit	18	65,603		\$9,578.00	\$100,000.00	\$196,964.00
Lighting	Lighting – Retrofit Interior Lamps to LED	3	5,553		\$811.00	\$8,000.00	\$17,208.00
Lighting	Lighting – LED Exit Signs	0	911		\$133.00	\$1,000.00	\$2,336.00
	Totals	85	199,603		\$29,142.00	\$224,000.00	\$546,645.00

Lighting Systems Retrofit

A significant portion of a facilities electrical costs comes from lighting, making lighting retrofits one of the quickest and simplest methods for reducing utility costs. In most cases the retrofits will result in improved light quality and reduced maintenance costs in addition to the estimated energy savings.

The method used for calculating energy savings is outlined below:

$$\text{Annual Saving, } \$ = \frac{(\text{Existing Watts} - \text{New Watts})}{1000} \times \text{Hours/Year} \times \text{Utility Rate} \times N$$

Where,

Existing Watts – Wattage rating for the existing (Baseline) light fixture

New Watts – New wattage rating for the existing light fixture

Hours/Year – Annual number of “burn-hours” (run hours for different areas; see detailed audit in Appendix C)

Utility Rate – Actual weighted composite utility rate, \$/kWh

N – Number of light fixtures of the particular type (see below & in Appendix C for the actual quantities).

The current interior lighting systems in the Lincoln Middle School buildings consist of a combination of 1st generation T-8, T-12, T-5, metal halide, compact fluorescent, and incandescent lamps and fixtures. Following examination of the data collected, a full retrofit of the lighting system with LED lamps and fixtures is recommended.

The current exterior lighting systems in the Lincoln Middle School buildings consist of compact fluorescent, 1st generation T-8, metal halide, high pressure sodium, and incandescent lamps and fixtures. Following examination of the data collected, a full retrofit of the lighting system with LED lamps and fixtures is recommended.

This retrofit will generate more saving, electrical demand reduction and better payback than other Energy Conservation Measures such as HVAC replacements. Upon installment of the new system, the campus will conserve 85.9665 kW and 199,604 kWh per year. The cost savings per year will be approximately \$29,142.12. A full detailed audit of the current lighting system implemented in the entire campus can be found in Appendix C.
