Re: PCB Removal Clearance Letter Malibu High School – Building F

### 1 PROJECT BACKGROUND

Alta Environmental DBA NV5 (NV5) conducted full-time monitoring and observation during the removal of flooring material containing polychlorinated biphenyls (PCBs) from Rooms 303 (Enhanced Lecture), 303A (Janitor's Closet), 303B (Lecture Prep), and 303C (office), which are located in Malibu High School Building F. The removal activities were conducted in accordance with the USEPA-approved *PCB Remediation Waste Plan – Buildings D, F, G, I and J* dated April 13, 2018 (Work Plan).

### 2 PROJECT OBSERVATIONS

### Flooring Removal Work Activities

Miller Environmental, Inc. (Miller) completed removal of PCB containing source material (adhesive) at the Site. Prior to beginning removal activities, a full containment work area including critical barriers, three-stage worker decontamination facility, and temporary negative pressure differential was established. Removal activities were completed by HAZWOPER trained technicians using manual means and wet methods.

Following the removal of all visible flooring material and associated adhesive, Miller and NV5 field personnel performed a final visual inspection. Once the area was found to be acceptably free of PCB-impacted materials, dust and other debris, Miller applied the specified 2-layer epoxy floor coating in accordance with the approved application. The final coat of the epoxy was applied on July 21, 2020. After an appropriate cure time, NV5 collected an initial set of wipe samples on July 22, 2020 to clear the work area for restoration activities.

Following restoration, NV5 collected final confirmation air samples on August 3, 2020 and final confirmation wipe samples of August 5, 2020. Based on the reported laboratory results, the subject work area was released back to the Santa Monica Malibu Unified School District for re-occupancy on August 6, 2020.

### 3 CONCLUSIONS

The previously identified PCB-impacted flooring materials within Malibu High School Building F Rooms 303, 303A, 303B and 303C were appropriately removed and disposed, and the remaining substrate was encapsulated in accordance with the USEPA-approved Work Plan.

## Data Qualifiers and Descriptors

### Data Qualifier:

#: Recovery is not within acceptable control limits.

\*: In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has

been applied.

B: Analyte was present in the Method Blank.

D: Result is from a diluted analysis.

E: Result is beyond calibration limits and is estimated.

H: Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory

control.

J: Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method

Detection Limit (MDL) and the Practical Quantitation Limit (PQL).

M: Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery

was acceptable.

MCL: Maximum Contaminant Level

NS: No Standard Available

S6: Surrogate recovery is outside control limits due to matrix interference.

S8: The analysis of the sample required a dilution such that the surrogate concentration was diluted below the

method acceptance criteria.

X: Results represent LCS and LCSD data.

### Definition:

%Limi: Percent acceptable limits.

%REC: Percent recovery.

Con.L: Acceptable Control Limits

Conce: Added concentration to the sample.

LCS: Laboratory Control Sample

MDL: Method Detection Limit is a statistically derived number which is specific for each instrument, each method,

and each compound. It indicates a distinctively detectable quantity with 99% probability.

MS DU:

Matrix Spike Duplicate

ND:

Analyte was not detected in the sample at or above MDL.

PQL:

Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can

be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical

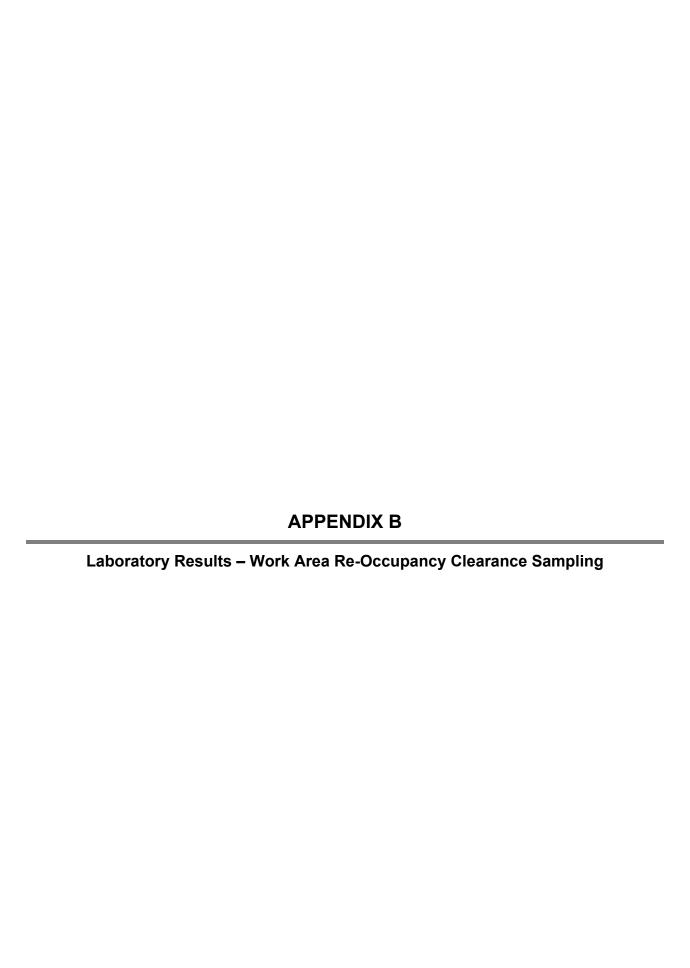

instrumentation and practice.

Recov:

Recovered concentration in the sample.

RPD:

Relative Percent Difference

**Subject:** 

Malibu Air Samples - COC

Hi Corey – I just discovered an error on the stated flow volume for the 3 PUF samples collected on 8/4/202 (as listed on the COC).

The volumes should be as follows:

F080320-1 7,125.0 L F080320-2 7,153.5 L F080320-3 7,147.1 L

F080320-B blank sample, no flow volume

### Regards,

ItemDefinitions%RECPercent Recovery°CDegrees Celsius

AETL American Environmental Testing Laboratory, LLC

CARB California Air Resources Board

COC Chain of Custody

Dup Duplicate

ELAP Environmental Laboratory Accreditation Program

EPA Environmental Protection Agency

HC Hydrocarbon

LACSD Los Angeles County Sanitation Districts

LCS Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of

analytes.

LCSD Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.

LOQ Limit of Quantitation

MDL Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence.

MDL is statistically derived number which is specific for each instrument, each method and each compound.

mg/kg Miligrams per Kilogram
mg/L Miligrams per Liter

MS Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as

an independent test results.

MSD Matrix Spike Duplicate - A replicate of Matrix Spike Sample.

N No

ND Analyte is not detected below Method Detection Limit.

ng/m3 Nanograms per cubic meter

NIOSH National Institute for Occupational Safety and Health

nL/L Nanoliters per Liter

NTU Nephelometric Turbidity Units

OSHA Occupational Safety and Health Administration

RL Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be

reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.

RPD Relative Percent Difference
SIM Selective Ion Monitoring
TPH Total Petroleum Hydrocarbons
ug/kg Micrograms per Kilogram
ug/L Micrograms per Liter
ug/m3 Micrograms per cubic meter

Y Yes

### **Qualifiers and Definitions**

ItemDefinitions%RECPercent Recovery°CDegrees Celsius

AETL American Environmental Testing Laboratory, LLC

CARB California Air Resources Board

COC Chain of Custody

Dup Duplicate

ELAP Environmental Laboratory Accreditation Program

EPA Environmental Protection Agency

HC Hydrocarbon

LACSD Los Angeles County Sanitation Districts

LCS Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of

analytes

LCSD Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.

LOQ Limit of Quantitation

MDL Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence.

MDL is statistically derived number which is specific for each instrument, each method and each compound.

mg/kg Miligrams per Kilogram
mg/L Miligrams per Liter

MS Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as

an independent test results.

MSD Matrix Spike Duplicate - A replicate of Matrix Spike Sample.

N No

ND Analyte is not detected below Method Detection Limit.

ng/m3 Nanograms per cubic meter

NIOSH National Institute for Occupational Safety and Health

nL/L Nanoliters per Liter

NTU Nephelometric Turbidity Units

OSHA Occupational Safety and Health Administration

RL Reporting Limit - The lowest concentration at which an analyte can be detected in a sample and its concentration can be

reported with a specified degree of confidence, accuracy and precision. For usage at AETL, RL is equivalant to LOQ.

RPD Relative Percent Difference
SIM Selective Ion Monitoring
TPH Total Petroleum Hydrocarbons
ug/kg Micrograms per Kilogram
ug/L Micrograms per Liter
ug/m3 Micrograms per cubic meter

Y Yes
